Rules, schema, and checks

milb.com robots and terms (round 2)	robots.txt: "User-agent: *" with an empty Disallow, so nothing disallowed. Terms: the MLB Terms of Use (updated 2025-03-11) cover MiLB.com and prohibit "use automated scripts to collect information from or otherwise interact with the MLB Digital Properties". The terms win, so MiLB was dropped as a source.
Owner-verified source type (round 2)	A source can record verifiedBy: "owner" with what you confirmed, the URL, and the date. Used for the Walmart AMP website, Gulley Park and Lake Atalanta ZIPs, and Arvest Ballpark's name and address.
former_addresses (round 4)	New field on venues, sourced like any other field, used only to match external records that still use an old address. In the seed file, the database (migration 0011), and the verification report.
ZIP rule (round 2)	Fill a missing ZIP from the Census geocoder and cite it; leave it empty only when the geocoder has no match; flag disagreements as warnings.
Geocoder rule (round 2)	A mismatch over 1 km is an error except for parks and campuses; hand checks are recorded and never clear errors.
Ticketmaster (round 4)	Ticketmaster coordinates are never used for display, distance, maps, or tagging. A point shared by 2+ Ticketmaster venues is a placeholder. Links are proposed (close name AND a real point within 150 m, or a matching current or former street address), never automatic. The 7 approved links are written and logged; Walton Arts Center's carries the sub-space "Baum Walker Hall".
Not included (unchanged)	Smoke & Barrel, Arkansas Air & Military Museum, Arts Center of the Ozarks, Murphy Park, Siloam Springs Public Library.
